You are probably wondering why is this optical illusion image on the cover page of this new issue of Vision Pan-America, The Pan-American Journal of Ophthalmology?

First of all, is it beautiful or what?

Now to the point: Curiosity is an instinctive characteristic of human beings. Curiosity has always been the motor of the evolution of the science and of the human kind. Without curiosity and close observation, science would not progress and evolutes to the point we are nowadays. It is scientifically proved that curiosity prepares the brain for better learning. 1

I bet my boots that you looked inside of this issue to check what is the meaning of this image on the cover page.

Well, we’ve got your attention, don’t we?

Now, you can go ahead, read the issue and learn about the role of imaging the anterior segment and the management of glaucoma, the prevalence of trachoma in Amerindians, the prevalence of intraretinal hemorrhages in newborns, the quality of information on glaucoma in the internet, the imaging of the retina in preterm birth newborns, what a bilateral ring-shaped corneal opacity could mean and the challenge of fungal infections in glaucoma drainage devices.

Be curious. It is worth a try!

Enjoy this issue!
