<i>Here I Am, Lover</i>	93	Miranda Pearson
<i>Front Cover</i> <i>xi. Stone House</i> Digital Photo		Penny Leong Browne
<i>Back cover</i> <i>vii. Firewood</i> Digital Photo		Penny Leong Browne

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons why the world's population is still hungry. First, the world's population is growing very rapidly. The world population is expected to reach 8 billion by the year 2025, and this will put a great strain on the world's food resources. Second, the world's food resources are being used in a very inefficient way. A large proportion of the world's food is wasted, and a large proportion of the world's food is used for the production of meat and other animal products, which are very inefficient uses of food resources.

Third, the world's food resources are being used in a very unequal way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Fourth, the world's food resources are being used in a very unsustainable way. A large proportion of the world's food is produced using methods that are unsustainable, and a large proportion of the world's food is produced using methods that are harmful to the environment.

Fifth, the world's food resources are being used in a very unfair way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Sixth, the world's food resources are being used in a very inefficient way. A large proportion of the world's food is wasted, and a large proportion of the world's food is used for the production of meat and other animal products, which are very inefficient uses of food resources.

Seventh, the world's food resources are being used in a very unequal way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Eighth, the world's food resources are being used in a very unsustainable way. A large proportion of the world's food is produced using methods that are unsustainable, and a large proportion of the world's food is produced using methods that are harmful to the environment.

Ninth, the world's food resources are being used in a very unfair way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Tenth, the world's food resources are being used in a very inefficient way. A large proportion of the world's food is wasted, and a large proportion of the world's food is used for the production of meat and other animal products, which are very inefficient uses of food resources.

Eleventh, the world's food resources are being used in a very unequal way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Twelfth, the world's food resources are being used in a very unsustainable way. A large proportion of the world's food is produced using methods that are unsustainable, and a large proportion of the world's food is produced using methods that are harmful to the environment.

Thirteenth, the world's food resources are being used in a very unfair way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Fourteenth, the world's food resources are being used in a very inefficient way. A large proportion of the world's food is wasted, and a large proportion of the world's food is used for the production of meat and other animal products, which are very inefficient uses of food resources.

Fifteenth, the world's food resources are being used in a very unequal way. A large proportion of the world's food is used by the rich, and a large proportion of the world's food is used by the poor.

Sixteenth, the world's food resources are being used in a very unsustainable way. A large proportion of the world's food is produced using methods that are unsustainable, and a large proportion of the world's food is produced using methods that are harmful to the environment.
