

D'Arcy Henderson / SPHERES
SCULPTURE / LIGHT / SITE / FILM

The object concerned is a clear plastic sphere, four and one-half inches in diameter. The sphere is formed by casting liquid resin in a spherical mold. When the resin hardens the resulting shape is polished to obtain maximum clarity. Upon completing sixty such spheres, they were then photographed and filmed. Various light conditions are used to obtain different effects. Also, the spheres are set in different locations — beaches, sand hills, etc. — the major concern being to develop a selection of possible arrangements and light conditions for future use. — D'Arcy Henderson
