

FOKKER F.27 *Friendship*

COMPLIES WITH

ICAO

REQUIREMENTS

The F. 27 „Friendship”, a high-wing twin-turboprop airliner, fully meeting I.C.A.O.-safety requirements, fulfils a longfelt need for airline operators with short to medium range traffic.

For normal traffic the „Friendship” has a 28-seat cabin arrangement, with backward facing seats, considerably increasing passenger safety.

For high-density or mixed cargo/passenger traffic the number of seats can be increased (32-40) or decreased (enlarging the cargo compartment).

ROYAL NETHERLANDS AIRCRAFT FACTORIES FOKKER

message *for Noah in his 600th year.*

The olive branch flown by the dove to Noah's Ark may well have been the earliest shore-to-ship message. But times have changed and so have means. The Arks of our days - proud liners and swift planes - impose requirements which can only be satisfied by the telecommunication industries. Today both radio and radar are so generally used in sea and air navigation that no one gives a second thought to the care, craftsmanship and experience, embodied in them, but you will be reminded whenever you see the frequently-used equipment with the simple nameplate: Philips Telecommunication

Aviation Products

- Outstanding leadership in aviation petroleum service does not just happen — it is the result of more than 45 years of aviation experience.
- 87 of the 91 successful trans-Atlantic flights — up to 1937 — used gasoline supplied by an ESSO refinery, and none of these flights failed.
- More recently, ESSO Laboratories here and in Europe have pioneered the development of synthetic turbine lubricating oils, which currently are being supplied for the design testing of certain of the newest and largest British and U.S. turbo jet engines. ESSO turbo oils have superior low temperature characteristics and at the same time show remarkable load-carrying ability at operating temperatures.
- Today, marketers of ESSO Aviation Products — at hundreds of major airports along the airways of the world — provide long-range airline operators and others with the most efficient ground service as well as uniform high quality fuels and lubricants.

RESEARCH

FOR

REALISM

Air Trainers Ltd. have established unique and specialised research and development facilities in order to evolve types and models of Air Trainers that keep pace with progress in aviation.

This powerful research team, the laboratories and the production capacity that back it up, are available to every manufacturing or operating organisation that has a need for synthetic trainers and/or flight simulators.

Equipment made by Air Trainers Ltd. faithfully reproduces conditions in all types of aircraft. Air Trainers Ltd. are always interested in new problems. Their work invariably leads to synthetic trainers whose outstanding virtue — amongst many others — is *realism*.

**TWO AIR FORCES AND
 THREE AIRLINE TRAINING
 SCHOOLS STANDARDIZE
 ON THE**

SAFIR

Latest organisation to choose the Safir is the Indonesian Aviation College at Djakarta which will equip its new pilot trainingschool with a number of Saab 91 Bs. The list of Safir operators now includes the Netherlands Government Civil Flying School, training pilots for the K.L.M. Royal Dutch Airlines; the Belgian Sabena, the Imperial Ethiopian Air Force and the Royal Swedish Airforce.

Besides making the new Saab 91 B Training/Tourer its standard primary trainer, Swedens Air Force is using an earlier version of the Safir for liaison.

Widespread interest in this all-metal aircraft - designed by SAAB - results from several years of succesful SAFIR operations in many parts of the world, and in varying climatic conditions. Latest laurels won by a SAAB SAFIR under difficult operating conditions was on the recent Norwegian-Swedish-British Antarctic Expedition. Using wheels, skis, or floats alike, the aircraft functioned perfectly throughout.

Soaring with instruments

The PERAVIA barograph works without ink or carbon, produces a clear, extended record with constant scale and rectilinear coordinates, sufficient for 30 hours flights. Many national and world records have been registered with this recording instrument of high precision in the United States of America, South Africa, Europe, India etc.

The PERAVIA barograph is the most well-tried and improved altigraph for all kinds of performance and training flights.

Pilots of private aircraft or sailplanes also praise such specially made instruments like the turn- and bankindicator, the accelerometer and accelerograph of PERAVIA.

Ces mains sont le gage de la perfection technique....

L'entretien des appareils est le facteur essentiel garantissant le maximum de régularité en vol. Les mains des mécaniciens de la Swissair vous adressent un message. Elles sont le symbole des fières traditions artisanales établies par des générations de Suisses. On reconnaît dans le monde entier que les Suisses ont une propension naturelle à travailler avec la plus grande précision. Avant chaque envol et après chaque voyage, ces mains vérifient l'appareil d'un bout à l'autre. Lorsque vous montez à bord d'un avion de la Swissair, vous avez la certitude que, humainement, il n'y a pas d'appareil techniquement plus au point que celui qui vous emporte. Voyagez à bord des nouveaux appareils de luxe et de tourisme DC-6B de la Swissair au-dessus de l'Atlantique, puis sur son réseau étendu en Europe et à destination du Proche-Orient. Se confier à Swissair.... c'est s'assurer un gage de précision et d'exactitude.
